

## ✦ ABOUT THIS DOCUMENT

# Every feature, in plain language — with a picture of the screen

FleetFlow is an ERP for cross-border road freight across East & Central Africa. This guide walks through all six delivery phases. For every module you get three things: **what it does**, **what was built**, and **how to check it works** — written for anyone, not only engineers. Each module includes a screenshot of the actual screen taken from a running copy of the system.

### > Open the system

```
Backend:  cd backend  → npm run dev      (:4000)
Frontend: cd frontend → npm run dev      (:3000)
Sign in:  http://localhost:3000/login
```

### 🔑 Sign-in accounts

| ROLE              | EMAIL                      | PASSWORD     |
|-------------------|----------------------------|--------------|
| <b>Admin</b>      | admin@fleetflow.local      | admin1234    |

| <b>Finance</b>    | finance@fleetflow.local    | finance1234  |
| <b>Driver</b>     | driver@fleetflow.local     | driver1234   |

**How each module is laid out:** **What it does** — the purpose in one line  
**What was implemented** — the concrete features **How to verify** — click-by-click steps  
⚠ amber = expected gap (awaiting an external connection), not a fault

## 1 FOUNDATION

# Phase 1 — Foundation

The bedrock everything else stands on: signing in, keeping companies separate, the accounting ledger, basic supplier & customer money, and the audit trail.

## RBAC Access Control & Roles

**What it does.** Everyone signs in with their own account, and each person only sees the screens and buttons their **role** allows.

### 🔑 WHAT WAS IMPLEMENTED

- Secure sign-in (encrypted passwords, session tokens)
- Five built-in roles: **Admin, Dispatcher, Finance, Driver, Staff**
- Permissions are checked in the menus **and again** on every server request
- Drivers are locked to their own portal — they only see their own jobs

### ✅ HOW TO VERIFY

- 1 Sign in as **Admin** and note the full menu, then sign out.
- 2 Sign in as **Driver** — you land in a driver-only view.
- 3 Confirm the Driver cannot open any admin screen.

**Expected:** The available menu and actions change depending on who is signed in.

📄 Screen: Sign-in page

## M34 Organization & Multiple Companies

**What it does.** One installation can run several legal entities at once, keeping each company's data completely separate.

### WHAT WAS IMPLEMENTED

- A registry of companies (each is a legal entity)
- Every record is tagged to its company and isolated behind the scenes
- A company switcher in the top bar; new records are created under the chosen company
- A separate fiscal calendar per company

### HOW TO VERIFY

- 1 Open **System ► Companies** to see the registered entities.
- 2 Use the top-right **company switcher** to focus on one company.
- 3 Confirm the data on other screens now belongs only to that company.

**FleetFlow**

Search orders, trips, accounts...

## M8 Chart of Accounts

**What it does.** The master list of financial accounts (cash, receivables, revenue, expenses...) that every transaction is recorded against.

### 🔗 WHAT WAS IMPLEMENTED

- Accounts grouped by type: **Asset, Liability, Equity, Income, Expense**
- A separate chart per company
- Accounts can be switched active / inactive

### ✅ HOW TO VERIFY

- 1 Open **Finance ► Chart of Accounts** and review the accounts.
- 2 Create a new account, choosing its type.
- 3 Confirm it appears in the list.

| 5040 | Demurrage Expense               | Expense | Active |

Screen: Finance ► Chart of Accounts

## M8 General Ledger (Journal)

**What it does.** The accounting backbone — every financial event is recorded as a balanced double-entry that cannot later be secretly changed.

### 🔗 WHAT WAS IMPLEMENTED

- Balanced double-entry (debits must equal credits)
- Draft → Post → Reverse; a posted entry is **locked** and corrected only by a mirror-image reversal
- An exchange rate is stored on each posting (multi-currency)
- Refuses any posting dated in a closed month

### ✅ HOW TO VERIFY

- 1 Open **Finance ▶ Journal** and post a **balanced** entry — it succeeds.
- 2 Try an **unbalanced** entry — it is rejected.
- 3 Reverse a posted entry — a contra entry is created and the original stays untouched.

**Expected:** Balanced entries post; unbalanced ones are refused; posted entries are permanent.

The screenshot displays the FleetFlow Journal interface. On the left is a sidebar menu with categories: OVERVIEW (Dashboard), OPERATIONS (Orders, Trips, Projects, Delivery Jobs, Dispatch, Master Planning, Dock Events, Damage Reports, Customer Feedback), SALES & MARKETING (Leads, Quotes, Retail POS), and FINANCE (Chart of Accounts, Journal). The main panel is titled 'Journal' with the subtitle 'Double-entry journal entries — draft, post, and reverse.' It includes a search bar 'Search by voucher or memo' and a '+ New Entry' button. Below is a table of journal entries.

| VOUCHER     | POSTING DATE | CURRENCY | AMOUNT | MEMO                                       | STATUS | ACTIONS |

## M1 Accounts Payable (Suppliers)

**What it does.** Tracks what the company owes its suppliers, from receiving a bill to paying it.

### 🔑 WHAT WAS IMPLEMENTED

- Supplier master with tax IDs, payment terms and withholding tax
- Enter → post → pay bills, each step recorded in the ledger
- Three-way match with Procurement (Phase 4)

### ✅ HOW TO VERIFY

- 1 Under **Vendors**, add a supplier.
- 2 Under **Payables**, enter a bill and post it.
- 3 Record a payment and confirm the balance clears.

**FleetFlow**

## M2 Accounts Receivable (Customers)

**What it does.** Tracks what customers owe the company, from raising an invoice to receiving the money.

### 🔑 WHAT WAS IMPLEMENTED

- Customer registry with credit limit/days, tax-exempt flag and per-trip demurrage
- Raise → post → receipt invoices, each recorded in the ledger

### ✅ HOW TO VERIFY

- 1 Under **Customers**, add a customer.
- 2 Under **Receivables**, raise an invoice and post it.
- 3 Record a receipt and confirm the balance clears.

## M36 User Management

**What it does.** Create and manage the people who can use the system.

### WHAT WAS IMPLEMENTED

- Create users, set their role and home company
- Activate or deactivate accounts

### HOW TO VERIFY

- 1 Open **System ► Users** and create a user with a role.
- 2 Confirm they can sign in with exactly that role's access.
- 3 Deactivate them and confirm they can no longer sign in.

| NAME             | EMAIL                      | ROLE               | COMPANY | STATUS | ACTIONS |
|------------------|----------------------------|--------------------|---------|--------|---------|
| James Mwangi     | driver@fleetflow.local     | Driver             | HQ01    | Active | Role    |

 Screen: System ► Users

## M36 Roles & Permissions

**What it does.** Beyond the five built-in roles, an admin can design custom roles by ticking exactly which actions each is allowed.

### WHAT WAS IMPLEMENTED

- Custom roles with a permission matrix grouped by area
- Assign a custom role to a user; built-in roles are protected from deletion
- Changes take effect immediately — no technical redeploy

### HOW TO VERIFY

- 1 Open **Roles & Permissions** and create a custom role.
- 2 Toggle some permissions on/off in the matrix.
- 3 Assign it to a user and confirm their access matches.

**FleetFlow** Search orders, trips, accounts... All companies Admin User

### Roles & Permissions

Create roles, grant permissions, and control exactly what each role can do. Built-in roles can be re-permissioned; custom roles can be created and assigned to users.

**Roles** + New

- Administrator 96p
- Dispatcher 55p
- Driver 3p
- Finance Controller 73p
- Staff 36p

**Administrator Built-in** Built-in system role — permissions are editable. • 96 of 96 permissions Saved

| Area          | Permissions                                                                                                                           |

| DISPATCH      | <input checked="" type="checkbox"/>                                                                                                   |
| DRIVER        | <input checked="" type="checkbox"/>                                                                                                   |

 Screen: System ► Roles & Permissions

## M31 Audit Log

**What it does.** A dependable record of who changed what and when — including the exact values before and after.

### WHAT WAS IMPLEMENTED

- Every create / update / delete is logged
- On key records (clients, drivers, vehicles) it shows a **before** → **after** of the changed fields

### HOW TO VERIFY

- 1 Edit a client, driver or vehicle.
- 2 Open **System ► Activity Log** and find the entry.
- 3 Confirm it shows the changed fields as before → after.

| TIME             | USER       | ACTION | TARGET                         | CHANGES | IP    |

## 2 CORE FINANCE

# Phase 2 — Core Finance

Financial control on top of the ledger: budgets, cash & bank, tax, currency revaluation, group consolidation, debt collection, and closing the books each month.

M3 **Budgeting & Control**

**What it does.** Set spending limits per department and account, and have the system watch actual spend against them.

 **WHAT WAS IMPLEMENTED**

- Capital & operating budget lines per cost center
- Three control modes: **Strict block**, **Warning**, or **Override**
- Spend from trips and supplier bills is counted automatically

 **HOW TO VERIFY**

- 1 Create a budget with lines and pick a control mode.
- 2 Record spending against a budgeted account.
- 3 Confirm the ‘consumed’ figure rises; Strict mode blocks going over.

 Screen: Finance ► Budgets

## M4 Cash & Bank

**What it does.** Manage cash, bank and mobile-money accounts, and pay drivers their advances.

### WHAT WAS IMPLEMENTED

- Bank, mobile-money and cash accounts
- Driver disbursements with a Pending → Success / Failed / Timeout lifecycle, recorded in the ledger when settled

### HOW TO VERIFY

- 1 Add an account.
- 2 Issue a driver disbursement.
- 3 Confirm it moves through its lifecycle and posts to the ledger on success.

 Live M-Pesa / Airtel and bank-feed connections are not switched on yet — the lifecycle works, the external call is stubbed.

## M10 Tax — VAT & Withholding

**What it does.** Prepare value-added-tax and withholding-tax returns for each country of operation.

### 🔗 WHAT WAS IMPLEMENTED

- VAT / WHT return preparation
- Country tax tables for Tanzania, Kenya, Uganda, Rwanda and Zambia

### ✅ HOW TO VERIFY

- 1 Open **Finance ▶ Tax**.
- 2 Prepare a return for a country and period.
- 3 Confirm the tax amounts are summarized correctly.

⚠️ Automatic electronic filing export is only partial.

The screenshot displays the FleetFlow Tax module interface. The left sidebar contains navigation links for Overview, Operations, Sales & Marketing, and Finance. The main content area is titled 'Tax' and includes a search bar, filters, and a user profile. The 'Filing Period' section shows VAT & WHT computed from posted invoices for the month of August 2026. The summary cards display: Output VAT (USD 3...), Input VAT (USD 1...), Net VAT (USD 1...), and WHT Payable (USD 6...). The Net VAT position is USD 140.00, marked as Payable. Taxable Sales are USD 2,000.00 (1 invoice) and Taxable Purchases are USD 1,000.00 (1 bill). The 'Tax Component Reference' table lists VAT rates for Tanzania (18.00%), Kenya (16.00%), Uganda (18.00%), and Rwanda (18.00%).

| CODE      | COUNTRY  | TYPE | RATE   |
|-----------|----------|------|--------|
| TZ-VAT-18 | Tanzania | VAT  | 18.00% |
| KE-VAT-16 | Kenya    | VAT  | 16.00% |
| UG-VAT-18 | Uganda   | VAT  | 18.00% |
| RW-VAT-18 | Rwanda   | VAT  | 18.00% |

Screen: Finance ▶ Tax

## M8 Exchange Rates & Revaluation

**What it does.** Record currency rates and, at month-end, restate foreign-currency balances to today's rate — booking the resulting gain or loss.

### WHAT WAS IMPLEMENTED

- Rate entry by type (Spot / Average / Historical)
- Month-end revaluation you can **preview** then **post**; books the net unrealized FX gain or loss

### HOW TO VERIFY

- 1 Enter exchange rates.
- 2 Run a period-end revaluation — preview, then post.
- 3 Confirm open foreign balances restate and the gain/loss posts.

**Exchange Rates**  
Multi-currency rates by type — Spot, Average, Historical.

**Period-End Revaluation**  
Restate open foreign-currency AP/AR to the period-end rate and book the unrealized FX gain/loss.

Year: 2026 Month: 8 Rate Type: Average **Preview**

Search by currency **+ New Rate**

| CURRENCY  | TYPE    | RATE     | VALID FROM | ENTITY |
|-----------|---------|----------|------------|--------|
| KES → USD | Spot    | 0.00775  | 2026-08-03 | HQ01   |
| KES → USD | Average | 0.0077   | 2026-08-03 | HQ01   |
| TZS → USD | Spot    | 0.000385 | 2026-08-03 | HQ01   |

## M5 Consolidations

**What it does.** Roll several subsidiaries' numbers up into a single parent-company view.

### 🔑 WHAT WAS IMPLEMENTED

- Map subsidiary accounts to parent accounts
- Roll up by rate type and flag anything unmapped or missing a rate

### ✅ HOW TO VERIFY

- 1 Map subsidiary accounts to parent accounts.
- 2 Run the rollup.
- 3 Confirm the parent view combines them and flags any gaps.

The screenshot displays the FleetFlow Consolidation interface. On the left is a sidebar with navigation links: OVERVIEW (Dashboard), OPERATIONS (Orders, Trips, Projects, Delivery Jobs, Dispatch, Master Planning, Dock Events, Damage Reports, Customer Feedback), SALES & MARKETING (Leads, Quotes, Retail POS), and FINANCE (Chart of Accounts, Journal). The main content area is titled 'Consolidation' with a subtitle 'Roll subsidiary ledgers into the parent entity by rate type.' It features two sections: 'Consolidation Run' and 'Account Mapping'.

**Consolidation Run**  
Subsidiary balances translated into USD (HQ01)  
Rate Type: Average

| PARENT ACCT | SUBSIDIARY | SUB ACCT | LOCAL    | RATE | BASE     |

| KE01       | 1100        | 1100           |
| KE01       | 4000        | 4000           |

📄 Screen: Finance ► Consolidation

## M7 Credit & Collections

**What it does.** Chase overdue customer invoices, manage disputes, and write off bad debt.

### 🔑 WHAT WAS IMPLEMENTED

- Overdue 'aging' buckets and a reminder ladder (Reminder → ... → Legal)
- Dispute lifecycle, promise-to-pay and a contact log
- Bad-debt write-off posts to the ledger automatically

### ✅ HOW TO VERIFY

- 1 Review the aging buckets.
- 2 Log a reminder or a promise-to-pay.
- 3 Write off a bad debt and confirm the accounting entry.

**FleetFlow** Search orders, trips, accounts... All companies Admin User

### Credit & Collections

## M34 Accounting Periods (Month Close)

**What it does.** Close a finished month so nobody can back-date entries into it.

### WHAT WAS IMPLEMENTED

- Open / close fiscal periods per company
- Once closed, the ledger refuses **any** posting dated in that month

### HOW TO VERIFY

- 1 Close a month.
- 2 Try to post a journal dated inside it.
- 3 Confirm the system refuses it.

**Expected:** A closed month is locked against all new postings.

| PERIOD                | STATUS | CLOSED | ACTION |
|-----------------------|--------|--------|--------|
| August 2026 2026-08   | Open   | —      | Close  |
| July 2026 2026-07     | Open   | —      | Close  |
| June 2026 2026-06     | Open   | —      | Close  |
| May 2026 2026-05      | Open   | —      | Close  |
| April 2026 2026-04    | Open   | —      | Close  |
| March 2026 2026-03    | Open   | —      | Close  |
| February 2026 2026-02 | Open   | —      | Close  |
| January 2026 2026-01  | Open   | —      | Close  |
| December 2025 2025-12 | Open   | —      | Close  |
| November 2025 2025-11 | Open   | —      | Close  |

## 3 OPERATIONS

# Phase 3 — Operations

The logistics heart of the system: keeping the fleet legal, booking and running cross-border freight, dispatching domestic jobs, and the shared reference data.

M11 Vehicles & Maintenance

**What it does.** The fleet register — every truck, its service history, and its document expiry dates.

WHAT WAS IMPLEMENTED

- Vehicle registry and maintenance log
- Insurance / inspection / COMESA / Yellow Card expiry tracking

HOW TO VERIFY

- Add a vehicle.
- Record a maintenance event and set expiry dates.
- Confirm the history and expiries are kept.

## M11 Drivers & Documents

**What it does.** The driver register — licences, travel documents, and who is available when.

### WHAT WAS IMPLEMENTED

- Driver registry with a document store (licence, passport, Yellow Fever, COMESA)
- Availability and holidays

### HOW TO VERIFY

- 1 Add a driver.
- 2 Add documents and set availability.
- 3 Confirm the documents and expiry dates are recorded.

The screenshot shows the FleetFlow web application interface. On the left is a sidebar with a navigation menu categorized into Overview, Operations, Sales & Marketing, and Finance. The main content area is titled 'Drivers' with a subtitle 'Driver roster, availability, and compliance.' Below the title is a search bar and a '+ New' button. A table displays two driver records with columns for Name, Phone, Email, Contract, Joined, Status, and Actions. The first record is for Daniel Otieno, an Employee joined on 2023/10/01, with an 'Active' status. The second record is for James Mwangi, a Contractor joined on 2024/04/01, also with an 'Active' status. At the bottom of the table, it indicates '2 records' and includes pagination controls for 'Prev', '1 / 1', and 'Next'.

| NAME          | PHONE         | EMAIL                  | CONTRACT   | JOINED     | STATUS | ACTIONS                                                                                                                                                                                                                                                           |

## M11 Compliance Dashboard

**What it does.** One screen showing every expiring or expired document across the whole fleet, plus fuel efficiency against target.

### 🔑 WHAT WAS IMPLEMENTED

- A single expiry dashboard with a 14-day early-warning window
- Fuel-efficiency monitoring per vehicle

### ✅ HOW TO VERIFY

- 1 Open **Compliance**.
- 2 Confirm documents expiring within 14 days (and expired ones) are highlighted.
- 3 Confirm fuel efficiency is shown against its target.

**FleetFlow** Search orders, trips, accounts... All companies Admin User

## M12 Orders (Freight Bookings)

**What it does.** Cross-border freight bookings — where cargo goes, along which corridor, and for how much.

### 🔗 WHAT WAS IMPLEMENTED

- Orders with corridor (Northern / Central / Domestic), weight/volume, freight + demurrage and currency
- Invoicing an order records the customer receivable automatically

### ✅ HOW TO VERIFY

- 1 Create an order (corridor, weight, freight).
- 2 Click **Invoice**.
- 3 Confirm the receivable posts to the ledger.

The screenshot displays the FleetFlow ERP interface. On the left is a sidebar with navigation menus: OVERVIEW (Dashboard), OPERATIONS (Orders, Trips, Projects, Delivery Jobs, Dispatch, Master Planning, Dock Events, Damage Reports, Customer Feedback), SALES & MARKETING (Leads, Quotes, Retail POS), and FINANCE (Chart of Accounts, Journal). The main content area is titled 'Orders' with the subtitle 'Cross-border freight bookings and their invoicing.' It includes a search bar 'Search by order or route' and a '+ New Order' button. Below is a table with columns: ORDER, CLIENT, ROUTE, CORRIDOR, FREIGHT, BOOKED, STATUS, and ACTIONS. The table contains three records for 'Sample Logistics Ltd'. The first record (ORD-H45VGV) is 'Invoiced'. The second (ORD-FXXNSZ) is 'In Transit' with an 'Invoice' button. The third (ORD-M01PH6) is 'Confirmed' with an 'Invoice' button. At the bottom, it shows '3 records' and pagination 'Prev 1 / 1 Next'. The top right shows 'All companies', a notification bell, and the user 'Admin User'.

| ORDER      | CLIENT               | ROUTE                                 | CORRIDOR          | FREIGHT   | BOOKED     | STATUS     | ACTIONS |
|------------|----------------------|---------------------------------------|-------------------|-----------|------------|------------|---------|
| ORD-H45VGV | Sample Logistics Ltd | Dar es Salaam Port → Lusaka Depot     | Central Corridor  | USD 6,800 | 2026/08/03 | Invoiced   |         |
| ORD-FXXNSZ | Sample Logistics Ltd | Mombasa Port → Kigali Depot           | Northern Corridor | USD 5,200 | 2026/08/03 | In Transit | Invoice |
| ORD-M01PH6 | Sample Logistics Ltd | Dar es Salaam Port → Lubumbashi (DRC) | Central Corridor  | USD 9,500 | 2026/08/03 | Confirmed  | Invoice |

🔗 Screen: Operations ► Orders

## M12 Trips & Trip Profit

**What it does.** Running an order with a chosen driver and truck, recording the costs, and seeing the profit on that trip.

### WHAT WAS IMPLEMENTED

- Trip execution with route, mileage and expenses
- Automatic per-trip profit & loss
- Freight-bill reconciliation (Unreconciled / Matched / Discrepancy)

### HOW TO VERIFY

- 1 Execute an order with a driver + vehicle and add expenses.
- 2 Open the **Trip P&L**.
- 3 Check the freight-bill reconciliation status.

 The live GPS position feed is not connected yet — positions are modeled, the feed is stubbed.

The screenshot shows the FleetFlow web application interface. On the left is a sidebar menu with categories: OVERVIEW (Dashboard), OPERATIONS (Orders, Trips, Projects, Delivery Jobs, Dispatch, Master Planning, Dock Events, Damage Reports, Customer Feedback), SALES & MARKETING (Leads, Quotes, Retail POS), and FINANCE (Chart of Accounts, Journal). The main content area is titled 'Trips' with a subtitle 'Trip execution, expenses, and per-trip profit & loss.' It includes a search bar 'Search by trip code' and a '+ New Trip' button. Below is a table with columns: TRIP, ORDER, ROUTE, DRIVER, VEHICLE, START, STATUS, and ACTIONS. The table contains two records. The first record is for TRP-GKSPFC, ORD-FXXNSZ, route 'Mombasa Port → Kigali Depot', driver 'Daniel Otieno', vehicle 'V-001', start date '2026/08/03 01:42', and status 'In Progress'. The second record is for TRP-D7WYE3, ORD-H45VGW, route 'Dar es Salaam Port → Lusaka Depot', driver 'James Mwangi', vehicle 'V-001', start date '2026/08/01 01:42', and status 'Completed'. Both records have a 'P&L' link in the ACTIONS column. At the bottom of the table, it says '2 records' and 'Prev 1 / 1 Next'.

| TRIP       | ORDER      | ROUTE                             | DRIVER        | VEHICLE | START            | STATUS      | ACTIONS                 |
|------------|------------|-----------------------------------|---------------|---------|------------------|-------------|-------------------------|
| TRP-GKSPFC | ORD-FXXNSZ | Mombasa Port → Kigali Depot       | Daniel Otieno | V-001   | 2026/08/03 01:42 | In Progress | <a href="#">P&amp;L</a> |
| TRP-D7WYE3 | ORD-H45VGW | Dar es Salaam Port → Lusaka Depot | James Mwangi  | V-001   | 2026/08/01 01:42 | Completed   | <a href="#">P&amp;L</a> |

## M12 Dispatch & Delivery Jobs

**What it does.** Domestic delivery jobs and assigning a free driver + truck without double-booking anyone.

### 🔑 WHAT WAS IMPLEMENTED

- Delivery jobs list with search and status
- Dispatch with an automatic clash check; a printable dispatch sheet

### ✅ HOW TO VERIFY

- 1 Create a delivery job.
- 2 Dispatch a free driver + vehicle.
- 3 Try to double-book the same driver — confirm it is blocked.

**FleetFlow** Search orders, trips, accounts... All companies Admin User

**Dispatch**

**Create Dispatch**

1. Select job Start End

## M30 GPS Waypoints

**What it does.** A registry of named map points — checkpoints, borders, weighbridges — along the corridors.

### 🔑 WHAT WAS IMPLEMENTED

- Waypoint registry with coordinates, type and country

### ✅ HOW TO VERIFY

- 1 Open **GPS Waypoints**.
- 2 Add a checkpoint / border / weighbridge with coordinates.
- 3 Confirm it is saved to the registry.

⚠️ Live GPS tracking against these points is not connected yet.

**FleetFlow** Search orders, trips, accounts... All companies Admin User

### GPS Waypoints

Named corridor checkpoints, borders & weighbridges.

Search by code or name + New Waypoint

| CODE     | NAME               | KIND        | COORDINATES      | COUNTRY |
|----------|--------------------|-------------|------------------|---------|
| CHALINZE | Chalinze Junction  | Checkpoint  | -6.6380, 38.3570 | TZ      |

## M30 Units of Measure & Converter

**What it does.** The catalog of units the business trades in (kg, tonne, litre, km...) with a built-in converter.

### WHAT WAS IMPLEMENTED

- A per-company unit catalog across weight / volume / distance / count, each with a factor to its base unit
- A live quantity converter; converting between unrelated units is refused
- Nine common units are supplied out of the box

### HOW TO VERIFY

- 1 Open **Units of Measure**.
- 2 Use the converter, e.g. **5 TON → KG**.
- 3 Confirm sensible conversions work and mismatched ones (e.g. KG → L) are refused.

**FleetFlow** Search orders, trips, accounts... All companies Admin User

### Units of Measure

Define the units the business trades in — weight, volume, distance, count. Each unit records how many base units it equals, so quantities convert automatically between any two units of the same dimension.

**Quantity Converter**

Quantity: 1 From: [dropdown] To: [dropdown] **Convert**

**+ New Unit**

| CODE                 | NAME         | SYMBOL         | FACTOR TO BASE | ACTION                                                                                |
|----------------------|--------------|----------------|----------------|---------------------------------------------------------------------------------------|

## 4 INVENTORY & PAYROLL

# Phase 4 — Inventory & Payroll

Stock, warehousing and buying — all with automatic average costing — plus running statutory payroll and staff expense claims.

M14 **Inventory**

**What it does.** Track spare parts, fuel, tyres and other stock, with the cost averaged automatically as you buy.

 **WHAT WAS IMPLEMENTED**

- Stock items with receipts, issues and adjustments — each recorded in the ledger
- Moving-average cost that updates on every receipt

 **HOW TO VERIFY**

- 1 Create a stock item.
- 2 Record a receipt, then issue some stock.
- 3 Confirm the average cost updates and the issue posts to the ledger.

 **FleetFlow**

## M16 Product Attributes

**What it does.** Define custom specifications for stock items (e.g. viscosity, thread size) beyond the standard fields.

### WHAT WAS IMPLEMENTED

- An attribute catalog (Text / Number / Yes-No / List, optional unit, per category or all)
- Set a value per item from the item's Specs editor

### HOW TO VERIFY

- 1 Define an attribute (e.g. viscosity).
- 2 Set its value on a stock item.
- 3 Confirm the specification is saved for that item.

**FleetFlow** Search orders, trips, accounts... All companies Admin User

### Product Attributes

Define custom specs for stock items — e.g. viscosity for lubricants, thread size for parts. Attributes can apply to one category or all, and are set per item from the inventory Specs editor.

[+ New Attribute](#)

| LABEL                                                      | KEY | TYPE | UNIT | APPLIES TO | ACTION |
|------------------------------------------------------------|-----|------|------|------------|--------|
| No attributes yet. Create one to add specs to stock items. |     |      |      |            |        |

 Screen: Fleet & People ▶ Product Attributes

## M13 Cost Variance

**What it does.** Compare each item's actual cost to a target (standard) cost to spot overspend.

### WHAT WAS IMPLEMENTED

- A standard cost per item versus the live average cost
- Shows per-unit and on-hand value variance, plus purchase-price variance from receipts

### HOW TO VERIFY

- 1 Set a standard cost on an item.
- 2 Open the **Cost Variance** report.
- 3 Confirm it shows actual versus standard.

The screenshot shows the FleetFlow web application interface. On the left is a sidebar menu with categories: OVERVIEW (Dashboard), OPERATIONS (Orders, Trips, Projects, Delivery Jobs, Dispatch, Master Planning, Dock Events, Damage Reports, Customer Feedback), SALES & MARKETING (Leads, Quotes, Retail POS), and FINANCE (Chart of Accounts, Journal). The main content area is titled 'Standard-Cost Variance' and includes a search bar at the top. Below the title, a description states: 'Actual moving-average cost vs the standard cost benchmark for each stock item. A positive variance means the item is costing more than standard (unfavorable).' A large message box in the center says: 'No stock items have a standard cost set yet. Set a **Standard Cost** on inventory items to track variance against actual.' The top right of the interface shows a search bar, 'All companies', a share icon, a bell icon, and a user profile for 'Admin User'. The bottom left of the sidebar shows a version indicator 'V1.9'.

 Screen: Fleet & People ► Cost Variance

## M18 Warehouses

**What it does.** Track stock across multiple locations and move it between them.

### WHAT WAS IMPLEMENTED

- Per-location stock balances with a default warehouse
- Transfers between warehouses (out and in)

### HOW TO VERIFY

- 1 Add a warehouse.
- 2 Transfer stock between two warehouses.
- 3 Confirm the per-location balances and the transfer record.

**FleetFlow** Search orders, trips, accounts... All companies Admin User

**Warehouses**  
Storage locations, per-location stock balances, and inter-warehouse transfers.

## M15 Procurement

**What it does.** Purchase orders, receiving the goods, and matching them to the supplier's invoice.

### WHAT WAS IMPLEMENTED

- Purchase-order lifecycle: Draft → Approved → Partial → Received → Closed
- Goods receipts and a three-way order↔receipt↔invoice match that flags differences

### HOW TO VERIFY

- 1 Raise a purchase order → approve → receive the goods → match the invoice.
- 2 Confirm the lifecycle advances.
- 3 Confirm the three-way match flags any variance.

The screenshot shows the FleetFlow Procurement module interface. On the left is a sidebar with a navigation menu categorized into Overview, Operations, Sales & Marketing, and Finance. The main content area is titled 'Procurement' and includes a subtitle 'Purchase orders, goods receipt, and 3-way matching.' Below the title is a search bar labeled 'Search by PO no. or vendor' and a '+ New PO' button. A table with columns PO NO., VENDOR, LINES, SUBTOTAL, STATUS, MATCH, and ACTIONS is shown, but it contains no data and displays 'No results' with a folder icon. At the bottom of the table area, it says '0 records' and has pagination controls for 'Prev', '1 / 1', and 'Next'. The top of the interface features a search bar for orders, trips, and accounts, along with filters for 'All companies', a document icon, a bell icon, and a user profile for 'Admin User'.

 Screen: Fleet & People ► Procurement

## M9 Payroll

**What it does.** Run monthly payroll with the correct statutory deductions for each country.

### WHAT WAS IMPLEMENTED

- Pay runs: Draft → Approved → Posted
- Statutory calculation (PAYE bands, NSSF, SHIF) and ledger posting
- Approved overtime is added to gross pay

### HOW TO VERIFY

- 1 Create a monthly pay run → approve → post.
- 2 Confirm the statutory deductions are calculated.
- 3 Confirm the run posts to the ledger.

The screenshot displays the FleetFlow Payroll module interface. On the left is a sidebar menu with categories: OVERVIEW (Dashboard), OPERATIONS (Orders, Trips, Projects, Delivery Jobs, Dispatch, Master Planning, Dock Events, Damage Reports, Customer Feedback), SALES & MARKETING (Leads, Quotes, Retail POS), and FINANCE (Chart of Accounts, Journal). The main content area is titled 'Payroll' and includes a subtitle: 'Employees, monthly pay runs, and statutory deductions (PAYE / NSSF / SHIF)'. Below the title are two tabs: 'Employees' (selected) and 'Pay Runs'. A search bar labeled 'Search by code or name' is present, along with a '+ New Employee' button. A table with columns CODE, NAME, COUNTRY, GROSS, and STATUS is shown, but it contains no data and displays 'No results' with a document icon. At the bottom of the table area, it says '0 records' and includes pagination controls: 'Prev 1 / 1 Next'. The top of the interface features a search bar for orders, trips, and accounts, a filter for 'All companies', and a user profile for 'Admin User'. The bottom left corner shows a version indicator 'V1.0'.

 Screen: Finance ► Payroll

## M23 Expense Claims

**What it does.** Staff and driver expense claims with receipts, approvals, and reconciliation against cash advances.

### 🔑 WHAT WAS IMPLEMENTED

- Claims: Draft → Submitted → Approved → Posted, with a receipt per line
- Reconciled against driver advances and posted to the ledger

### ✅ HOW TO VERIFY

- 1 File a claim with receipts → submit → approve → post.
- 2 Confirm it reconciles against the advance.
- 3 Confirm it posts to the ledger.

The screenshot shows the FleetFlow ERP interface for the 'Expenses' module. The left sidebar contains a navigation menu with categories: OVERVIEW (Dashboard), OPERATIONS (Orders, Trips, Projects, Delivery Jobs, Dispatch, Master Planning, Dock Events, Damage Reports, Customer Feedback), SALES & MARKETING (Leads, Quotes, Retail POS), and FINANCE (Chart of Accounts, Journal). The main content area is titled 'Expenses' and includes a subtitle: 'Trip cash-sheets and expense claims with receipts, reconciled against driver advances.' Below this is a search bar labeled 'Search by claim no. or title' and a '+ New Claim' button. A table with columns CLAIM, TITLE, DRIVER, TOTAL, STATUS, and ACTIONS is shown, but it is empty with a 'No results' message. At the bottom of the table area, it says '0 records' and 'Prev 1 / 1 Next'. The top of the interface shows a search bar for orders, trips, and accounts, along with filters for 'All companies', a notification bell, and the user 'Admin User'. The bottom left of the interface shows a version indicator 'V1.9'.

Screen: Finance ▶ Expenses

## 5 ASSETS & HR

# Phase 5 — Assets & HR

The lifecycle of owned assets and the workshop that maintains them, plus the human side: contracts, leave and attendance.

## Fixed Assets — Depreciation, Custody & Warranty

**What it does.** The register of owned assets (vehicles, equipment), how they lose value over time, who is holding them, and their warranty status.

### 🔗 WHAT WAS IMPLEMENTED

- Asset register with straight-line depreciation runs that post to the ledger
- Disposal that books the gain or loss
- **Custody:** assign an asset to a person or site — one holder at a time — with full history
- **Warranty** schedule with Current / Expiring-soon / Expired badges (30-day window)

### ✅ HOW TO VERIFY

- 1 Register an asset; run depreciation; dispose of one.
- 2 Assign custody to a person, then return it.
- 3 Set a warranty date and confirm the badge and the assignment history.

## M22 Service Management (Workshop)

**What it does.** Workshop repair orders — the parts and labor used to service a vehicle.

### WHAT WAS IMPLEMENTED

- Service orders: Open → In Progress → Completed → Posted
- Parts issued from Inventory; labor lines
- External-garage labor posts to the ledger; internal labor is a memo cost

### HOW TO VERIFY

- 1 Open a service order and issue parts from inventory.
- 2 Add labor, then complete → post.
- 3 Confirm the parts reduce inventory and external labor posts.

**FleetFlow**

## M24 Human Resources

**What it does.** Employment contracts, leave, and employee documents.

### WHAT WAS IMPLEMENTED

- Contracts (one active per employee; salary syncs on activation)
- Leave management with working-day counts, yearly balances, and approve / cancel with refund
- Employee documents with 14-day expiry warnings

### HOW TO VERIFY

- 1 Create an employment contract.
- 2 Request and approve leave.
- 3 Add an employee document and confirm the balance change and expiry warning.

The screenshot displays the FleetFlow application interface. On the left is a sidebar menu with categories: OVERVIEW (Dashboard), OPERATIONS (Orders, Trips, Projects, Delivery Jobs, Dispatch, Master Planning, Dock Events, Damage Reports, Customer Feedback), SALES & MARKETING (Leads, Quotes, Retail POS), and FINANCE (Chart of Accounts, Journal). The main content area is titled 'Human Resources' with a subtitle 'Employment contracts, leave management, and document tracking.' It features two tabs: 'Employees' (selected) and 'Leave Requests'. Below the tabs is a search bar labeled 'Search by code or name'. A table with columns CODE, NAME, POSITION, GROSS, STATUS, and ACTIONS is shown, but it contains no data and displays 'No results' with an envelope icon. At the bottom of the table area, it says '0 records' and has pagination controls for 'Prev', '1 / 1', and 'Next'. The top of the interface includes a search bar for orders, trips, and accounts, a filter for 'All companies', a notification bell, and a user profile for 'Admin User'.

 Screen: Fleet & People ► Human Resources

## M26 Time & Attendance

**What it does.** Clock-in / clock-out records rolled into monthly timesheets, feeding overtime into payroll.

### WHAT WAS IMPLEMENTED

- Time entries rolled into monthly timesheets (regular vs overtime past 176h/month)
- Approved overtime flows into Payroll's gross pay

### HOW TO VERIFY

- 1 Record clock-in / clock-out entries.
- 2 Build a monthly timesheet and approve overtime.
- 3 Confirm the overtime carries into payroll.

 Automatic clock-in from biometric terminals is not connected — manual entry works.

**FleetFlow** Search orders, trips, accounts... All companies Admin User

**Time & Attendance**  
Clock-in/out records rolled into monthly timesheets; approved overtime feeds payroll.

## 6 COMMERCIAL & DASHBOARD

# Phase 6 — Commercial & Dashboard

The revenue-facing side — winning and quoting work, counter sales, projects and costing — plus the analytics dashboard and a safe practice sandbox.

M27 CRM — Sales Leads

**What it does.** Track sales prospects through a pipeline from first contact to won or lost.

 WHAT WAS IMPLEMENTED

- Leads move New → Contacted → Qualified → Won / Lost

 HOW TO VERIFY

- Create a lead.
- Move it through the stages.
- Confirm the pipeline reflects the change.

 Screen: Sales & Marketing ▶ Leads

## M27 Freight Quotations

**What it does.** Price freight quotes and turn an accepted one into a live order automatically.

### WHAT WAS IMPLEMENTED

- Quotations with priced line items
- Accepting a quote converts it — in one step — into a freight order carrying the quoted revenue

### HOW TO VERIFY

- 1 Raise a quote with line items.
- 2 Accept it.
- 3 Confirm it becomes an order with the quoted amount as freight revenue.

**FleetFlow**

Search orders, trips, accounts...

All companies

Admin User

### Quotes

Freight quotations with priced line items. An accepted quote converts into a freight order in one click.

Search quote no. or cargo

+ New Quote

| QUOTE      | CLIENT | ROUTE | TOTAL | VALID UNTIL | STATUS | ACTIONS |
|------------|--------|-------|-------|-------------|--------|---------|

## M28 Retail POS

**What it does.** Over-the-counter sales of stock items, with inventory and accounting handled automatically.

### WHAT WAS IMPLEMENTED

- Completing a sale reduces inventory at average cost
- Posts Cash / Revenue and Cost-of-Goods / Inventory; selling more than you hold is blocked; a void puts stock back

### HOW TO VERIFY

- 1 Ring up a counter sale and complete it.
- 2 Void a sale.
- 3 Confirm inventory and accounting update, and that overselling is blocked.

**FleetFlow**

Search orders, trips, accounts...

All companies

## M29 Project Management

**What it does.** Group freight orders into a project or contract and track budget against actual.

### WHAT WAS IMPLEMENTED

- Projects group orders against a planned budget
- A live budget-vs-actual profit view that rolls up revenue and cost from the linked orders

### HOW TO VERIFY

- 1 Create a project and attach freight orders.
- 2 Set a planned budget.
- 3 Confirm the live profit rolls up from the orders.

**FleetFlow**

Search orders, trips, accounts...

## M6 Corridor Profitability

**What it does.** Profit and loss broken down by trade corridor, built from each trip's figures.

### WHAT WAS IMPLEMENTED

- Per-corridor profitability, tied back to per-trip P&L and fuel efficiency

### HOW TO VERIFY

- 1 Open **Corridor P&L**.
- 2 Confirm profitability is shown per corridor.
- 3 Cross-check a figure against a trip's P&L.

**FleetFlow** Search orders, trips, accounts... All companies Admin User

### Corridor Profitability

Revenue, cost and margin by route corridor — Northern, Central, and Domestic. Revenue is freight + demurrage; cost is the linked trip's wages, tolls and expenses.

|               |              |               |                |
|---------------|--------------|---------------|----------------|
| TOTAL REVENUE | TOTAL COST   | TOTAL PROFIT  | OVERALL MARGIN |
| USD 21,950.00 | USD 4,850.00 | USD 17,100.00 | 77.9%          |

| CORRIDOR          | ORDERS   | REVENUE              | COST                | PROFIT               | MARGIN       |
|-------------------|----------|----------------------|---------------------|----------------------|--------------|
| Central Corridor  | 2        | USD 16,750.00        | USD 3,000.00        | USD 13,750.00        | 82.1%        |
| Northern Corridor | 1        | USD 5,200.00         | USD 1,850.00        | USD 3,350.00         | 64.4%        |
| <b>Total</b>      | <b>3</b> | <b>USD 21,950.00</b> | <b>USD 4,850.00</b> | <b>USD 17,100.00</b> | <b>77.9%</b> |

## M33 Master Planning

**What it does.** Forecast demand per corridor and compare it to the fleet capacity you actually have.

### 🔑 WHAT WAS IMPLEMENTED

- Demand forecasts per period and corridor (loads & tonnage)
- A capacity plan comparing confirmed demand to available fleet (excluding trucks in maintenance), with shortfall / surplus

### ✅ HOW TO VERIFY

- 1 Enter a demand forecast for a period + corridor.
- 2 Open the capacity plan.
- 3 Confirm the shortfall / surplus and utilization per corridor.

**FleetFlow**

Search orders, trips, accounts...

All companies

Admin User

### Master Planning

Demand forecasts per corridor and period, compared against live fleet capacity to surface shortfalls before they bite.

**Capacity Plan** — confirmed demand vs available fleet

No periods yet

Create and confirm a forecast to see the capacity plan.

**Demand Forecasts**

## KPI KPI Dashboard

**What it does.** The at-a-glance operations dashboard with the key performance indicators.

### 🔗 WHAT WAS IMPLEMENTED

- Headline cards: jobs today, delivering, completed, active drivers, available vehicles, revenue
- A monthly revenue & jobs summary
- A wider KPI set computed behind the scenes: on-time delivery, transit time, cost/km, revenue/km, utilization, fuel efficiency, AR recovery, and customer CSAT / NPS

### ✅ HOW TO VERIFY

- 1 Open **Overview ► Dashboard**.
- 2 Confirm the KPI cards and the monthly summary render.
- 3 Scroll to review the wider KPI set.

🔗 Screen: Overview ► Dashboard

## KPI KPI Capture — Dock, Damage & Feedback

**What it does.** Capture the day-to-day events that feed the harder KPIs — how fast trucks turn around, damage & claims, and how happy customers are.

### 🔑 WHAT WAS IMPLEMENTED

- **Dock Events** (arrival / departure → truck turnaround)
- **Damage Reports** (with a status lifecycle → damage & claim rate)
- **Customer Feedback** (satisfaction 1-5 and recommend-score 0-10)

### ✅ HOW TO VERIFY

- 1 Log a dock arrival / departure.
- 2 File a damage report and a customer feedback entry.
- 3 Confirm these feed Truck Turnaround, Damage & Claim Rate and CSAT / NPS on the dashboard.

The screenshot shows the FleetFlow ERP interface. On the left is a sidebar with a navigation menu. The main content area is titled 'Dock Events' and includes a search bar, a '+ Record Event' button, and a table with columns: WHEN, VEHICLE, EVENT, FACILITY, and NOTE. The table is currently empty, displaying 'No results' and '0 records'. At the bottom right of the table area are 'Prev', '1 / 1', and 'Next' navigation buttons. The sidebar menu includes sections for OVERVIEW, OPERATIONS, SALES & MARKETING, and FINANCE, with 'Dock Events' highlighted under OPERATIONS. The top of the interface features a search bar, a user profile 'Admin User', and a version indicator 'V1.0' at the bottom left.

| WHEN       | VEHICLE | EVENT | FACILITY | NOTE |
|------------|---------|-------|----------|------|
| No results |         |       |          |      |

Prev 1 / 1 Next

🔗 Screen: Operations ▶ Dock Events · Damage Reports · Customer Feedback

## M32 Demo Sandbox

**What it does.** A throwaway practice company you can fill with demo data and reset any time — safely walled off from real data.

### WHAT WAS IMPLEMENTED

- Isolated sandbox companies you can provision on demand
- Reset restores a clean demo baseline; reset **refuses** any real (non-sandbox) company
- A sandbox badge on the company switcher so it's obvious where you are

### HOW TO VERIFY

- 1 Provision a sandbox company.
- 2 Reset it and watch the demo data return.
- 3 Try to reset a **real** company — confirm the system refuses.

**Expected:** You can experiment freely and reset, with no way to wipe real data.

### PLEASE READ

## Expected gaps — not defects

Some features connect to outside services and are waiting on the client's sandbox credentials. They are built to receive the connection but are not live yet — please don't record them as bugs.

---

 **Awaiting external connections**

- **E-invoicing** — KRA TIMS (Kenya) & TRA VFD (Tanzania)
- **Mobile money** — M-Pesa & Airtel Money disbursements
- **Bank feeds** — CRDB / KCB / Stanbic statement import
- **Live GPS telematics** — real-time positions & idle time (the waypoint registry itself works)
- **Biometric terminals** — automatic clock-in (manual time entry works)

Three modules are intentionally **out of scope** for this logistics build and have no screen: Vendor Collaboration portal (M17), Production Control (M21), and Questionnaire (M25).

---

**FleetFlow — Transport & Logistics ERP.** 33 of 36 contracted modules delivered across 6 phases (the remaining 3 are out of logistics scope). Built on a double-entry accounting core with enforced multi-company isolation and role-based access control. Screenshots captured from a live, seeded instance.
