

F

FleetFlow ERP

• CLIENT OVERVIEW • FUNCTION & ARCHITECTURE

One connected system for cross-border freight.

An integrated ERP that unifies freight operations, fleet & people, and full double-entry finance — built for the East & Central Africa trade corridors.

 Transport & Logistics  TZ · KE · UG · RW · ZM · DRC  6 phases · 33 modules delivered

- THE CHALLENGE

Freight runs on disconnected tools.

Operators juggle spreadsheets, messaging apps and separate accounting — so the same trip is entered many times, and nobody has one reliable picture.

- **Operations & finance are siloed** — a booking, its trip costs and its invoice live in different places.
- **Cross-border complexity** — multiple currencies, countries, tax regimes and compliance documents.
- **No single source of truth** — profitability per trip, per corridor or per customer is guesswork.
- **Manual, error-prone accounting** — double entry done by hand, late, and hard to audit.

• THE SOLUTION

Book it, run it, get paid — in one place.

FleetFlow ties the whole freight lifecycle to a **double-entry accounting core**, so every operational action keeps the books correct automatically.

Freight ops

Orders, trips, dispatch, corridors
& profitability.

Fleet & people

Vehicles, drivers, compliance, HR
& payroll.

Finance

Ledger, AP/AR, tax, budgets,
multi-currency.

Insight

Live KPI dashboard for day-to-day
decisions.

• WHERE THE BUILD STANDS

Delivered and proven.

33 / 36

PRD modules delivered
(3 remaining are out of logistics scope)

6

Delivery phases — all complete, from
foundation to dashboard

6

Countries & trade corridors supported

47

Operational screens across the business

266

Automated tests protecting the accounting &
logic

5 + custom

Access roles, fully configurable by the admin

• THE ROADMAP, DELIVERED

Built in six phases.

Phase 1

Foundation

Access control, ledger, AP/AR, multi-company, audit.

✓ Done

Phase 2

Core Finance

Budgets, cash & bank, tax, currency, consolidation.

✓ Done

Phase 3

Operations

Fleet, freight orders & trips, dispatch, GPS.

✓ Done

Phase 4

Inventory & Payroll

Stock, warehouses, procurement, payroll, expenses.

✓ Done

Phase 5

Assets & HR

Fixed assets, workshop, HR, time & attendance.

✓ Done

Phase 6

Commercial & Dashboard

CRM, quotes, POS, projects, KPI analytics.

✓ Done

01

• PART ONE

What it does

The business capabilities — how a freight booking becomes cash, and everything around it.

• THE CORE WORKFLOW

From booking to cash — accounted automatically.

✓ Every step posts balanced double-entry accounting behind the scenes — no manual bookkeeping.

• END-TO-END COVERAGE

One system across the whole business.

Operations

- Orders & trips
- Dispatch & jobs
- Master planning

Sales

- CRM leads
- Quotations
- Retail POS

Finance

- Ledger, AP/AR
- Budgets & tax
- FX & consolidation

Fleet & People

- Vehicles & drivers
- Compliance
- HR & attendance

Inventory

- Stock & warehouses
- Procurement
- Cost variance

Assets

- Fixed assets
- Depreciation
- Workshop

Analytics

- KPI dashboard
- Corridor P&L
- CSAT / NPS

System

- Companies & users
- Roles & audit
- Demo sandbox

• FUNCTION · OPERATIONS & FLEET

Run the corridor, keep the fleet legal.

Freight execution

M12

Cross-border orders and trips with corridor, weight/volume, per-trip profit, and freight-bill reconciliation. Dispatch domestic jobs with automatic clash-checking.

Fleet compliance

M11

Every truck & driver document — insurance, inspection, COMESA, Yellow Card — on one dashboard with a 14-day expiry warning, plus fuel-efficiency monitoring.

Corridor profitability

M6

Profit and loss by trade corridor, built from each trip — so the most and least profitable routes are obvious.

Planning & waypoints

M30 · M33

Forecast demand per corridor against real fleet capacity, and a registry of border posts, checkpoints and weighbridges.

• FUNCTION • FINANCE

A real accounting engine — not a report add-on.

Double-entry ledger

M8

Balanced postings that must reconcile; posted entries are locked and corrected only by reversal. An exchange rate is stored on every posting.

Payables & receivables

M1 · M2

Supplier bills and customer invoices with terms, withholding tax, credit limits and collections — all feeding the ledger.

Tax, budgets & control

M3 · M10

VAT/WHT for five countries, and budgets that actively block or warn on overspend as costs are booked.

Multi-currency & group

M5 · M8

Month-end currency revaluation and subsidiary-to-parent consolidation, with a fiscal calendar that locks closed months.

• FUNCTION • PEOPLE, ASSETS & COMMERCIAL

The rest of the operation, connected.

Payroll & HR

M9 • M24

Monthly pay runs with statutory deductions (PAYE, NSSF, SHIF), contracts, leave, and attendance that feeds overtime into pay.

Assets & workshop

M20 • M22

Asset register with depreciation and custody, and workshop service orders drawing parts from inventory.

Sell & deliver

M27 • M28 • M29

CRM leads, quotes that convert straight into orders, retail POS, and projects tracking budget vs actual.

• MULTI-COUNTRY • MULTI-COMPANY

One platform, many entities.

Run several legal entities on a single installation, each with its own books — and keep every record strictly walled off between them.

- **Six corridors** — Tanzania, Kenya, Uganda, Rwanda, Zambia and DRC.
- **Per-company isolation** — data is separated automatically, at the database layer.
- **Cross-entity view** — admins switch companies from the top bar.

6

Countries in one system

1 DB

Isolated per legal entity

3

Corridor types: Northern,
Central, Domestic

∞

Companies on one platform

• FUNCTION · ANALYTICS

Decisions from live data.

A KPI dashboard turns the day's operations into the numbers managers actually watch — across five areas.

Delivery

On-time %, transit time, load fill, truck turnaround, delivered orders.

Cost & profit

Cost/km, revenue/km, freight cost per shipment, empty-load rate.

Fleet

Asset utilization, fuel efficiency, maintenance/km, breakdown rate.

Drivers

Active drivers, driver turnover, safety.

Customer

Billing accuracy, AR recovery, outstanding AR, CSAT & NPS.

Capture

Dock events, damage reports and feedback feed the harder KPIs.

02

• PART TWO

How it's built

The architecture, the technology, and the controls that make it trustworthy and ready to scale.

• SYSTEM ARCHITECTURE

Two services, cleanly separated.

• TECHNOLOGY CHOICES

Modern, proven, maintainable.

FRONTEND

Next.js 15 · **React 19** · Tailwind · shadcn/ui

BACKEND API

Hono · **TypeScript** · Zod validation

DATABASE

PostgreSQL · via Prisma ORM

AUTHENTICATION

NextAuth v5 · JWT bearer tokens

ACCOUNTING

In-house double-entry engine · precise decimals

QUALITY

266 automated tests · fully type-checked

• SECURITY & ACCESS CONTROL

The right people, the right actions.

Role-based access

Five built-in roles plus fully custom ones. Permissions are enforced **twice** — in the menus and again on every server request.

Separation of duties

Accounting authority (Finance) is kept apart from operations editing (Dispatch); user administration is admin-only.

Secure by design

Encrypted passwords, signed session tokens, validated inputs everywhere, parameterized queries, and security headers.

Full audit trail

Every change is logged with a before → after record of exactly what was altered, by whom, and when.

- DATA INTEGRITY YOU CAN TRUST

Correct by construction.

- **Books that must balance** — entries are rejected unless debits equal credits; posted entries can never be silently edited.
- **Multi-currency precision** — amounts use exact decimals, with a rate captured on every posting.
- **No lost updates** — if two people edit the same record, the stale change is refused rather than overwriting.
- **Locked periods** — once a month is closed, nothing can be back-dated into it.
- **Company isolation** — enforced at the query layer, so one entity can never read another's data.

• EXTERNAL INTEGRATIONS

Built to plug in — on your credentials.

The data models are already in place to receive these connections. They switch on once the client provides sandbox access.

KRA TIMS e-invoicing

TRA VFD e-invoicing

M-Pesa

Airtel Money

Bank feeds (CRDB · KCB · Stanbic)

Live GPS telematics

Biometric terminals

These are the natural **next milestone** — enabling them needs the client's provider credentials. Everything they attach to is already built and tested.

• WHERE WE ARE & WHAT'S NEXT

Delivered, tested, ready for sign-off.

✓ **Done**

33 of 36 modules across all 6 phases, protected by 266 automated tests.

→ **Next**

User acceptance testing & sign-off, then enable external integrations.

☑ **Then**

Go-live, with training on the interactive verification guide.

Thank you — questions welcome.
